FROM THE EDITORS

# The patient who built the practice.

In her mid-thirties Penny Foskaris spent more than two and a half years with dizzy spells, chronic fatigue and an abdominal pain that would not let up. Doctor after doctor. Test after test. Nobody could say what was wrong, and every month of not knowing cost money.

Then a holistic wellness center, and within a week she was feeling better. She went back to school. The practice she opened afterward, Foskaris Wellness, was built to be the place she had needed during those years: nobody rushed out the door, the whole person looked at, time spent listening. She called the philosophy Reveal. Restore. Reverse. More than five thousand people have since worked with her.

Red Light Pro Devices came later, out of necessity. Her clients had been using a professional red light system in the center for about three years and wanted something for home. She tested about a dozen home devices and could not recommend one. The maker of the roughly $28,000 clinic system was not interested in building smaller units. Engineers at another red light company were, and the months that followed went into LED configuration and power.

Before wellness, she was in the restaurant business with her family. When people told her they wanted a restaurant because it looked like easy money, she told them they would be married to it. Her first question to anyone who wants to start a business is still the same one: why do you want to do this.

Her answers to our eight questions follow in full, in the order we asked them, beginning on page seven. We have not trimmed them. She has spent ten years being precise with people about their health, and she was precise with us.

PRIMECREST EDITORIAL DESK · REVEAL. RESTORE. REVERSE.

THE SIGNATURE STORY

## Penny Foskaris

It began in a library. One aunt had Type 1 diabetes. Another family member had heart disease. As a teenager she spent hours reading about nutrition and health, trying to find out whether there was anything she could do to help them.

In her mid-thirties the question turned personal. Dizzy spells, chronic fatigue, continuous abdominal pain. Two and a half years of appointments and tests, and no one could say what was wrong.

A holistic wellness center changed that inside a week. She went back to school, then opened Foskaris Wellness, where the first appointment is mostly listening.

Founder of Foskaris Wellness and Red Light Pro Devices. More than ten years in business, and more than five thousand clients.

THE LIGHT

## They take it home.

For about three years her clients had professional red light therapy in the center. Then they began asking what they could buy for home.

She tested about a dozen home devices. Wrapped around a knee or an elbow, most brought little or no relief anyone could feel. The professional system often did by the end of a session.

Its maker, asked for something smaller, was not interested. Engineers at another red light company were. Months of testing followed on the LED configuration and the power.

The standard was plain. If her name was going on a device, it had to be one she would use in her own wellness center.

At the Red Light Pro Devices location in Anaheim Hills, a device can be rented for a month and the rental put toward the purchase.

Next, she says: high school athletic programs, recovery rooms at home, and a practice people can reach from anywhere.

“

*If you don’t feel well enough to enjoy those years, that’s not truly living.*

PENNY FOSKARIS · FOUNDER

**$28,000**

THE CLINIC SYSTEM HER CLIENTS WANTED TO TAKE HOME

DEMO

# Listen first. Test second.

## *Reveal*

A symptom, she says, is often the end result. The work starts with history and a conversation: how someone is sleeping, what they eat every day and whether it is enough, medications, lifestyle, stress.

Body composition and visceral fat give the first measurable picture. She does not order every possible test on day one. That first analysis already says a great deal.

DEMO

## *Restore*

Nutrition often comes first. Under-nourishing the body can bring deficiencies, hormonal imbalance, lost muscle, low energy and poor sleep. Sleep is the other early question. A body that does not rest cannot properly repair.

Many of the poor sleepers she has seen were also under-eating. Once they were fed properly, many of them slept better.

## *Reverse*

Then the plan is watched and adjusted, and another layer is added when it is needed: hormones, micronutrients, other health markers.

No two people get the same protocol. The plan has to be one a person can actually follow, and it keeps changing as the body answers.

“

*If I was going to put my name behind a device and recommend it to my own clients, it had to be something I would actually use in my wellness center myself.*

# 01 *What inspired you to establish Red Light Pro Devices and Foskaris Wellness?*

My interest in nutrition and chronic disease actually began when I was a teenager. I had an aunt with Type 1 diabetes and another family member with heart disease, and I would spend hours in the library researching nutrition and health, trying to understand if there was anything I could do to help them. I didn't realize it at the time, but those early experiences planted the seed for what would eventually become my life's work.

Then, in my mid-30s, health became very personal. For more than two and a half years, I struggled with unexplained dizzy spells, chronic fatigue, and continuous abdominal pain. I went from doctor to doctor and had test after test, but no one could figure out what was wrong. It was physically exhausting, emotionally frustrating, and incredibly expensive.

Eventually, I visited a holistic wellness center, and within a week I began feeling better. That experience completely changed the direction of my life. It inspired me to return to school and ultimately open Foskaris Wellness, where I could take a more holistic approach to helping people.

I wanted to create the kind of wellness center I had needed during those difficult years—a place where people weren't rushed out the door, where I could spend time listening to them, looking at the whole person, and helping them understand what their body needed. I also wanted it to be a place where people could relax and reduce stress while working toward their health goals. That became the philosophy behind Reveal. Restore. Reverse.

Since then, I've had the privilege of helping more than 5,000 people improve their health, lose body fat, reduce pain and stress, improve important health markers, and work toward overcoming chronic health challenges. Ultimately, my goal is to help people live with vitality and feel their best, because longevity isn't simply about how many years you live. If you don't feel well enough to enjoy those years, that's not truly living.

Red Light Pro Devices came later, and it was born out of necessity. I had already been using professional red light therapy with my clients for about three years when they began asking me for devices they could use at home to continue supporting their recovery between visits.

We tested different home devices, but I wasn't satisfied with what was available. I wanted something that could provide my clients with a professional-quality experience similar to what we were using in the wellness center. I initially approached the company that manufactured our approximately $28,000 professional system and asked whether they would develop smaller home-use devices. They weren't interested.

So I decided to find another way. I began working with engineers from a red light therapy company to develop devices that could bring the quality and performance I wanted into a format people could conveniently use at home.

That's how Red Light Pro Devices began. It wasn't originally about starting another company. It was about solving a problem for my clients and giving people access to a technology I had already seen become an important part of supporting recovery, reducing discomfort, and helping them stay active.

DEMO

# 02 *How has your background in nutrition and research shaped the way you approach your clients' health and wellness?*

I've always approached health like a researcher. A symptom is often the end result, so rather than focusing only on the symptom, I look at a person's history and work to identify the multiple root causes and contributing factors that may have led them there.

It starts with a conversation. I want to understand what's happening in someone's life right now as well as their health history. How are they sleeping? What are they eating every day, and just as importantly, are they eating enough? Are they taking medications? What does their lifestyle look like? What are their stress levels? We can also begin with measurable information such as body composition and visceral fat levels.

Sleep is one of the biggest factors I look at. If the body doesn't rest, it can't properly repair. So much of our body's restoration and recovery takes place while we sleep, and poor sleep can affect how someone feels and functions throughout the day.

I also look at the relationship between sleep and nutrition. Over the years, I've worked with many people who weren't sleeping well and were also under-nourishing their bodies. Once we improved their nutrition and gave their bodies the fuel and nutrients they needed, many of them began sleeping better as well. Everything is interconnected, which is why it's important to look at the whole picture rather than isolating one symptom.

I don't believe in overwhelming someone with every possible test on day one. We can learn a tremendous amount from that initial analysis, put a personalized plan into place, and see how their body responds.

Nutrition is often one of the first areas we address because under-nourishing the body can contribute to nutrient deficiencies, hormonal imbalances, loss of muscle, low energy, poor sleep, and other problems. Sometimes getting the nutritional foundation in place can make a significant difference.

Then, if we need to investigate further, we can go deeper with testing such as hormones, micronutrients, and other health markers.

For me, wellness isn't about giving everyone the same protocol. It's about listening, gathering the right information, understanding how the different pieces may be connected, and creating a realistic plan that the person can actually follow. Then we continue to analyze, adjust, and add another layer when necessary.

*If the body doesn't rest, it can't properly repair.*

DEMO

# 03 What makes your red light therapy solutions unique in today's wellness market?

There are many red light therapy products on the market today, and before I ever considered developing my own, we tested about a dozen different home-use devices in our wellness center. I was genuinely hoping to find something I could confidently recommend to my clients so they could continue supporting their recovery at home.

The difference we observed was significant. We might wrap one of the home-use devices we purchased online around a client's knee or elbow and they often reported little to no noticeable relief. Yet when we used the professional red light therapy system in our wellness center, clients frequently told us they felt a difference by the end of their session.

It was frustrating because my clients kept asking, "What can I buy to use at home?" and I didn't have something I felt comfortable recommending.

Initially, I approached the manufacturer of the professional system we were using and asked if they would consider developing smaller home-use devices, but they weren't interested. So I eventually connected with another red light therapy company that was already manufacturing home-use products and began working with their engineers.

We spent months testing and refining the devices—adjusting the LED configuration and power to create something that could deliver the level of performance I was looking for while still being appropriate and convenient for home use.

That's really what makes Red Light Pro Devices different to me. They weren't developed because I saw a popular wellness trend and wanted to create a product. They grew out of years of hands-on experience using red light therapy with real clients and identifying a gap between the professional equipment we were using and the home-use products available at the time.

My goal was simple: if I was going to put my name behind a device and recommend it to my own clients, it had to be something I would actually use in my wellness center myself.

PENNY FOSKARIS · ON RED LIGHT PRO DEVICES

# 04 *What achievement are you most proud of throughout your entrepreneurial journey?*

What I'm most proud of isn't a particular business milestone. It's creating a place where people can come when they're struggling with their health, feel heard, and hopefully begin finding answers that can help them improve their lives.

I know personally what it feels like to not feel well for years and have unanswered questions. I know the frustration of going from appointment to appointment, having test after test, and still not understanding why you don't feel like yourself. Unless you've experienced it, it's difficult to understand how much that can affect every part of your life.

That's why some of the most meaningful moments for me are when we help someone uncover pieces of their health that they hadn't understood before. Sometimes people have been struggling for years. Being able to listen to their story, help reveal some of the factors that may be contributing to how they feel, and give them a path forward is incredibly rewarding.

Over the years, I've had the privilege of working with more than 5,000 people. I've watched people improve their health, become stronger, reduce pain, reach weight and body-composition goals, improve important health markers, have more energy, and regain the confidence to do things they enjoy again.

That's what I'm most proud of—knowing that something I created has helped people feel better and live better. I turned one of the most difficult periods of my own life into something that could help other people struggle less, and to me, that's a much greater measure of success than any business accomplishment.

PENNY FOSKARIS · ON WHAT SHE IS PROUDEST OF

5,000+

PEOPLE SHE HAS WORKED WITH

# 05 *How do you see red light therapy evolving in the future of recovery, wellness, and cognitive health?*

I believe we're still in the early stages of understanding the potential of red light therapy and photobiomodulation. As more clinical research is published and awareness grows, I believe we'll see greater acceptance among healthcare professionals, athletes, wellness practitioners, and the general public.

One area I'm particularly excited about is athletics. I envision a future where red light therapy becomes part of the normal performance and recovery environment for athletes beginning as early as high school. Rather than thinking only about recovery after an athlete is sore or injured, I believe we'll see greater emphasis on supporting the body before training and competition as well as afterward.

I can see high schools, colleges, and universities incorporating red light therapy into their athletic programs as another tool to support warm-up, performance, recovery, and the long-term well-being of their athletes.

I also believe we're going to see red light therapy move beyond clinics and athletic facilities and become much more common in people's homes. Just as people have created home gyms, saunas, and dedicated wellness spaces, I envision more homes having recovery rooms that incorporate technologies such as red light therapy as part of a proactive approach to healthy aging.

The emerging research surrounding photobiomodulation and cognitive and brain health is especially fascinating to me. I believe this will be an important area of continued research, and I'm excited to see what we learn over the next decade about how light-based technologies may support healthy brain function as we age.

Ultimately, my vision is much bigger than red light therapy alone. I believe the future of health will become increasingly proactive. Instead of waiting until something goes wrong, people will begin thinking much earlier about how today's choices affect the way they will feel 10, 20, or 30 years from now.

Technology can be an important part of that, but we can't forget the foundation. Nutrition, sleep, movement, stress management, and what we consistently put into our bodies still matter tremendously. My hope is that the future of wellness combines those fundamentals with emerging technologies to help people not only live longer, but stay active, independent, and able to enjoy those additional years.

DEMO

*People will begin thinking much earlier about how today's choices affect the way they will feel 10, 20, or 30 years from now.*

# 06 *What is your vision for Red Light Pro Devices and Foskaris Wellness in the coming years?*

My vision for Foskaris Wellness is for it to become a hub of wellness and longevity information that people can access no matter where they live. Technology has given us the ability to reach people across the United States and eventually around the world through education, telehealth, remote testing, and personalized guidance from the comfort of their own homes.

I had one client who would actually fly in twice a month to see me. As you can imagine, that became expensive and time-consuming. Today, being able to work with people remotely, coordinate testing, and send certain wellness devices directly to them has completely changed what's possible. Someone shouldn't have to live close to my office to have access to information and resources that may help them live a better life.

I want to help people build a clearer roadmap for their health. That begins with understanding their health history and what's happening in their life today—how they're sleeping, their relationship with food, what and how much they're eating, their lifestyle, and other factors that may be affecting how they feel. From there, we can determine what additional testing may be valuable and give them direction on what steps to take next.

For Red Light Pro Devices, my vision is equally ambitious. I would love to see our technology being used in clinics across the country. We already develop devices for professional as well as home use, and I believe there's a tremendous opportunity to connect those two environments.

At our Red Light Pro Devices location in Anaheim Hills, we've created a rent-to-buy program that allows someone to experience the technology at home before making the commitment to purchase. They can rent a device for a month, see how it fits into their own wellness or recovery routine, and if they decide to purchase it, apply their rental cost toward the device.

My vision is to bring that model into wellness and healthcare offices throughout the United States, where people can experience the technology, rent a device to use at home, and then decide whether it's something they want to incorporate into their lifestyle long-term.

Ultimately, I see Red Light Pro Devices becoming a household name. As more people create wellness rooms or dedicated wellness spaces in their homes, I want a Red Light Pro Device to be one of the technologies they choose to have there.

Both companies share the same larger purpose: making wellness more accessible. Whether that's giving someone access to information, testing and personalized guidance from hundreds of miles away, or giving them access to professional-quality red light technology at home, I want to remove barriers that keep people from being proactive about their health.

DEMO

*Someone shouldn't have to live close to my office to have access to information and resources that may help them live a better life.*

# 07 *What advice would you give to aspiring women entrepreneurs who want to turn their ideas into meaningful businesses?*

The first question I would ask is, "Why do you want to do this?"

Your "why" has to be strong enough to carry you through the parts of entrepreneurship that aren't exciting, because having a great idea is very different from building a successful business around that idea.

Before I entered the wellness industry, I was in the restaurant business with my family. People would sometimes tell me they wanted to open a restaurant because they thought it was an easy way to make money. I would tell them, "There is nothing easy about owning a restaurant. You're going to be married to it. There will be times when you spend more time with that restaurant than you do with your family."

I think that lesson applies to almost any business. How passionate are you about what you're creating? How long have you wanted to do it? And most importantly, what impact do you want this business to make in the world? When things become difficult—and they will—those answers matter.

Then you have to take the passion and put a foundation underneath it.

I would encourage any aspiring entrepreneur to create a real business plan. Understand what you're building. Is it an online business, a brick-and-mortar location, or both? What will it cost to operate? Will you need insurance? What licenses or requirements apply? How will you handle bookkeeping and accounting? What systems need to be in place behind the scenes?

Those things may not be as exciting as creating the product, designing the logo, or making the first sale, but they're what allow you to build something sustainable.

I would also encourage women to write down exactly what they envision their business looking like at year one, year three, and year five. Don't just think about how much money you want the business to make. Think about what you want it to become, who you want it to serve, and what difference you want it to make.

A meaningful business needs both passion and structure. Your passion gives you the reason to keep going; your plan gives you the foundation to turn that passion into something that can last.

*Your passion gives you the reason to keep going; your plan gives you the foundation to turn that passion into something that can last.*

DEMO

# 08 *What does being an "Unstoppable Leader" mean to you?*

To me, being an unstoppable leader doesn't mean that you never experience setbacks. It means that when something changes or doesn't work as planned, you're willing to learn from it, adapt, and find another way forward.

In more than ten years of business, I've had to pivot many times as markets have changed, new research has emerged, and the needs of my clients have evolved. I've watched businesses struggle because they continued doing exactly what they had always done, even when the world around them was telling them it was time to change.

I've adopted the mindset that setbacks can be the springboard for innovation. Sometimes the obstacle in front of you is exactly what forces you to look at something differently and create a better solution.

Being open-minded has been one of the most important parts of my growth as an entrepreneur. I don't want to build my businesses based only on what works today. I'm constantly looking ahead—at emerging research, new technology, changing needs, and where health and wellness are going next.

The vision I had when I started more than a decade ago has evolved in ways I never could have predicted, and I think that's a good thing. A strong vision gives you direction, but it shouldn't prevent you from evolving.

"*Setbacks can be the springboard for innovation.*

# Years. Rooms. Devices.

*From the library to Anaheim Hills, as she told it.*

01

## The library

A teenager reading about nutrition and health because an aunt had Type 1 diabetes and another family member had heart disease.

02

## Two and a half years

Her mid-thirties. Dizzy spells, chronic fatigue, continuous abdominal pain. Doctor after doctor, test after test, no answer.

03

## One week

A holistic wellness center, and she begins to feel better. Back to school, then Foskaris Wellness.

04

## More than 5,000

People she has worked with on body fat, pain, stress, health markers and chronic health challenges.

05

## About $28,000

The professional red light system in the center. Its maker would not build for home. Engineers at another red light company would.

06

## Rent to buy

At Red Light Pro Devices in Anaheim Hills: a month at home, the rental cost applied toward the device.

07

## The why

Her first question to any founder. She learned the answer matters in her family's restaurant business.

08

## More than ten years

In business, with many pivots as markets, research and client needs changed. Next: telehealth, remote testing, and rent-to-buy in offices nationwide.
