Ambition, applied to the body.

Founders tend to count time in quarters. Sergey Shayakhmetov counts it in decades, and he is precise about why.

His company AIvarix developed AI for venous assessment and was acquired by a major pharmaceutical company. What he took from that was practical knowledge: how an idea moves through development and scientific work, and then into the market. What he does with it now is Longevium, an ecosystem around longevity, preventive medicine and human performance. Clinics in Dubai. AI tools for doctors. Brain assessment built on EEG. A travel platform. Research ambitions that run years out.

What stayed with us after reading his answers was the impatience with hype. He wants a prototype, a well-designed experiment, or a difficult problem understood properly. He thinks the word “breakthrough” is easier to produce than the thing itself, and he says so in print.

He is wry about his own household. His wife, Dr Kseniia Butova, brings the clinical perspective; he brings technology and entrepreneurship. The conversations at home, he reports, are very interesting.

We have printed his ten answers whole, in the order he gave them. Fig. 01 on page 08 maps the company from his own description and nothing else. His advice to founders is on page 16. It is short, and worth reading twice.

DEMO

DEMO

THE LONGEVITY MINDSET.

ON AI, AMBITION AND BUILDING A LONGEVITY ECOSYSTEM

His first AI company was acquired by a major pharmaceutical company. Now Sergey Shayakhmetov runs three clinics in Dubai and wants to know what happens to a patient over the next ten years.

DEMO

Sergey Shayakhmetov was working with artificial intelligence long before "AI-powered" became compulsory in every investor presentation. His background is engineering and building technology businesses. He founded AIvarix, which developed AI for venous assessment. A major pharmaceutical company acquired it.

The exit gave him something practical: a working knowledge of how an idea moves through development, scientific work and commercialisation. It also left him with a larger question. What can be built today that will help people live better decades from now?

Longevium is the answer he is building. He is its founder and chief executive, and the company is assembling an ecosystem around longevity, preventive medicine and human performance. His wife, Dr Kseniia Butova, brings the clinical perspective. He brings the technology and the entrepreneurship.

What interests him is a contradiction most founders live inside. People spend years building businesses, accumulating assets and planning their futures, then discover that enjoying any of it depends on the one thing they barely invested in.

BEFORE
AIvarix
AI for venous assessment. Acquired.

NOW
Longevium
Founder and CEO.

ON THE GROUND
Dubai
Three clinics operating.

[02] BIOLOGY

His position is plain. Ambition should extend to biology. People are comfortable wanting better businesses and better technology. Wanting to stay strong, sharp and independent for longer deserves the same seriousness.

[03] A BUSY TUESDAY

The clinics keep him honest. The group now operates three of them in Dubai, and real people arrive with real expectations. A process that looked elegant on a diagram has to work on a busy Tuesday morning. He is happy to think ten years ahead. He also wants to know why a patient has not received a clear answer today.

The hardest work, in his experience, happens between disciplines. Engineers, doctors, researchers and investors can look at one project and see four completely different problems. The job is to bring those views together without losing momentum, and without pretending a better presentation will settle everyone's concerns.

[04] PROOF

He is hands-on with AI himself and uses it to challenge assumptions about how much time, money and manpower a project really needs. The question he likes to put to a team is whether a working version could be built this week. Clinical research asks harder ones: what is being tested, how it will be measured, what would change minds.

A futuristic-looking device, in his phrase, is a design achievement. Calling it a medical breakthrough requires a different level of proof.

[05] NEXT

Expansion to Abu Dhabi and Bali is planned. Brain-health and AI projects are being developed alongside the clinics, with longer-term research ambitions in neuroscience and regenerative medicine. Longevium.travel is meant to help patients and doctors find wellness and longevity destinations through AI-assisted, medically informed recommendations.

He has a young daughter. When he thinks about longevity, he pictures being actively involved in her life decades from now, and still having adventures of his own. That, he says, makes the ambition very concrete.

DEMO

FORTIORA FORGE

AI AGENT PLATFORM

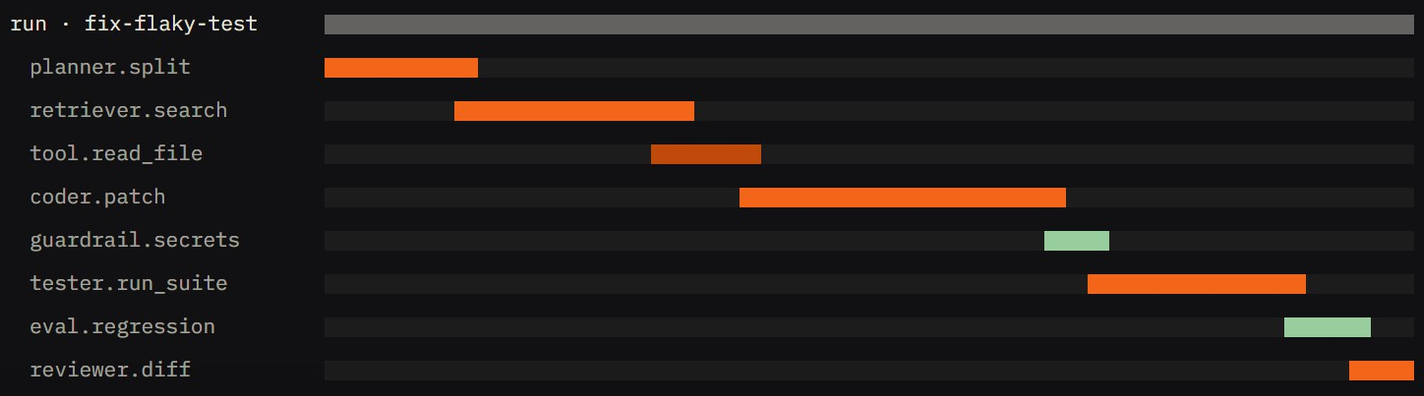

Agents that do the work. Traces that show it.

Forge is where engineering teams build AI agents, wire them together, test them against evaluations and run them inside guardrails. Every step is traced, so when an agent does something surprising, you can see exactly where and why.

FOR ENGINEERING TEAMS · ORCHESTRATION · EVALUATIONS · GUARDRAILS · TRACING

TRACE · RUN FIX-FLAKY-TEST — OBSERVABILITY

EVALUATIONS · BEFORE RELEASE — GATE

suite	regression	golden tasks re-run on the new prompt	PASS
suite	tool use	right tool, right arguments, right order	PASS
policy	secrets	no credentials in diffs or logs	PASS
policy	scope	agent touched files outside the task	HOLD

01 · ORCHESTRATION

Agents as a team

Planners, workers and reviewers with clear hand-offs, retries and a human gate where you want one.

02 · EVALUATIONS

Tested before trusted

Run every change against your own tasks and policies. Nothing ships on a hunch.

03 · GUARDRAILS

Limits that hold

Scoped permissions, blocked actions and approval steps, enforced at run time.

04 · TRACING

Every step on record

Prompts, tool calls and outputs in one trace, searchable when something goes sideways.

PRIOR COMPANY

AIvarix

AI for venous assessment. Exit through acquisition by a major pharmaceutical company.

NOW

Longevium

Founder and CEO. Longevity, preventive medicine, human performance.

CLINICAL PERSPECTIVE

Dr Kseniia Butova

His wife.

THE CONTRADICTION

"Enjoying any of it depends on something we may have barely invested in: our health."

THE BIGGER QUESTION

"What can we build today that will help us live better decades from now?"

> **"I think ambition should extend to our biology.**
>
> SERGEY SHAYAKHMETOV

01 Could you briefly share your professional journey?

I've been working with AI and technology for years - long before "AI-powered" became compulsory in every investor presentation.

My background is in engineering and building technology businesses. I founded AIvarix, which developed AI for venous assessment and achieved a successful exit through acquisition by a major pharmaceutical company. That experience gave me a practical understanding of how an idea moves through development, scientific work and commercialisation.

Today, I'm the Founder and CEO of Longevium, where we're building an ecosystem around longevity, preventive medicine and human performance.

The question that interests me has become much bigger: what can we build today that will help us live better decades from now?

02 What inspired you to join or work with Longevium?

We spend years building businesses, accumulating assets and planning our futures. Then we discover that enjoying any of it depends on something we may have barely invested in: our health.

That contradiction fascinates me.

Longevium grew out of the belief that we can take a much more active, intelligent approach to ageing. My wife, Dr Kseniia Butova, brings the clinical perspective, and I bring technology and entrepreneurship. That makes for some very interesting conversations at home.

I think ambition should extend to our biology. We're comfortable wanting better businesses, better technology and better lives. Wanting to remain strong, sharp and independent for longer deserves the same seriousness.

CLINICS · DUBAI

03

Operated by the group today. The foundation of the ecosystem.

ONE PROJECT, FOUR VIEWS

01 Engineers

02 Doctors

03 Researchers

04 Investors

“Four completely different problems.”

THE APPROACH

“Stay ambitious about the destination and very practical about the next step.”

THE REAL TEST

“A process that looked elegant on a diagram suddenly has to work on a busy Tuesday morning.”

> **“I’m interested in what happens over the next ten years of that person’s life.**
>
> SERGEY SHAYAKHMETOV

03 What is your current role and key focus at Longevium?

As Founder and CEO, I’m building the connections between clinical care, technology, research and the way people actually live.

Our clinics provide the foundation. Our development work includes AI tools for doctors, EEG-based brain assessment and immersive neurotechnology. Longevium.travel extends that vision into wellness and longevity travel.

The challenge is making these pieces useful together. Someone should be able to understand their health, access appropriate expertise, follow a practical plan and see how they progress over time.

A beautiful clinic can make a strong first impression. I’m interested in what happens over the next ten years of that person’s life. That is the scale of relationship we want to build.

04 What major challenges have shaped your career?

The hardest work often happens between disciplines. Engineers, doctors, researchers and investors can look at the same project and see four completely different problems.

I’ve had to learn how to bring those perspectives together without losing momentum - or pretending that everyone’s concerns can be solved with a better presentation.

Operating clinics is particularly grounding. Real people arrive with real expectations. A process that looked elegant on a diagram suddenly has to work on a busy Tuesday morning.

That has shaped my approach: stay ambitious about the destination and very practical about the next step. I’m happy to think ten years ahead, but I also want to know why a patient hasn’t received a clear answer today.

DEMO

THE FOUNDER'S QUESTION

IN HIS WORDS

“Could we build a working version this week?

DEMO

SERGEY SHAYAKHMETOV · ON LEADERSHIP AND INNOVATION

“I’m hands-on with AI myself. It helps me challenge assumptions about how much time, money and manpower a project really needs.”

01 · BUILD

“Show me a prototype, a well-designed experiment or a difficult problem you’ve understood properly.”

02 · TEST

“What are we testing, how will we measure it, and what would change our minds?”

03 · ADVANCE

“The imagination to create and the discipline to find out whether it works.”

Build. Test. Advance.

THE PEOPLE HE LIKES

"People who can turn curiosity into something tangible."

THE LEVEL OF PROOF

"Calling it a medical breakthrough requires a different level of proof."

CLINICAL RESEARCH ASKS

01 What are we testing?

02 How will we measure it?

03 What would change our minds?

TWO KINDS OF EXPERIENCE

Building intellectual property and bringing technology to market. Delivering care in the real world.

MILESTONE

"The AIvarix exit was a defining milestone."

> **"A futuristic-looking device is a design achievement.**
>
> SERGEY SHAYAKHMETOV

05 How do you approach leadership and innovation?

I like people who can turn curiosity into something tangible. Show me a prototype, a well-designed experiment or a difficult problem you've understood properly. That gives us something useful to discuss.

I'm hands-on with AI myself. It helps me challenge assumptions about how much time, money and manpower a project really needs. Sometimes the most productive question a founder can ask is, "Could we build a working version this week?"

In clinical research, the questions become more demanding: what are we testing, how will we measure it, and what would change our minds?

A futuristic-looking device is a design achievement. Calling it a medical breakthrough requires a different level of proof.

I want our team to have the imagination to create and the discipline to find out whether it works.

06 What key achievements are you most proud of?

The AIvarix exit was a defining milestone. Seeing a major pharmaceutical company acquire something we had built was meaningful recognition of the work behind it.

I'm also proud of building a group that now operates three clinics in Dubai. Developing technology and running healthcare operations give you very different kinds of experience. Having both changes the questions you ask and the decisions you make.

Together, they give Longevium a strong starting point: experience in building intellectual property, bringing technology to market and delivering care in the real world.

What excites me now is putting that experience behind a more ambitious goal - creating an organisation capable of developing new products and contributing to the science of healthy ageing.

DEMO

Beyond the clinic.

AS THE INDUSTRY MATURES

"Companies will face tougher questions about evidence, outcomes and value."

ON BIOHACKING

"I want to see that curiosity supported by better research and more meaningful measurement."

EXPANSION

Dubai → Abu Dhabi, Bali

THE ECOSYSTEM, IN MOTION

Longevium.travel

WELLNESS / LONGEVITY / TRAVEL

WHAT PEOPLE WILL ASK

"How do I preserve my strength, protect my cognitive abilities and remain independent?"

> **"Longevity is too important to leave its reputation entirely in the hands of marketing.**
>
> SERGEY SHAYAKHMETOV

07 How do you see your industry evolving in the coming years?

I expect longevity to become a much more significant part of how people think about healthcare, consumption and the second half of their lives.

People will increasingly ask: how do I preserve my strength, protect my cognitive abilities and remain independent? Those questions create opportunities for medicine, AI, biotechnology and entirely new services.

Biohacking has brought energy and curiosity into this conversation. I want to see that curiosity supported by better research and more meaningful measurement.

The word "breakthrough" is currently much easier to produce than a breakthrough. As the industry matures, companies will face tougher questions about evidence, outcomes and value.

That is a future I welcome. Longevity is too important to leave its reputation entirely in the hands of marketing.

08 What are your future professional goals?

I want to build Longevium into an international ecosystem that can deliver care, develop proprietary technologies and create the conditions for useful research.

Our expansion plans include Abu Dhabi and Bali. Alongside the clinics, we're developing brain-health and AI projects, with longer-term research ambitions in neuroscience and regenerative medicine.

We're also developing Longevium.travel, a platform designed to help patients and doctors find wellness and longevity destinations through AI-assisted, medically informed recommendations.

A person might know they need a reset but have no idea which programme, destination or expertise would actually fit their goals. We want to make that decision more intelligent and connect travel with a broader approach to health.

I see enormous potential in bringing clinical expertise, technology and exceptional environments together.

DEMO

A future worth having.

LASTING IMPACT

"I would like us to expand people's sense of what remains possible as they grow older."

FOR FOUNDERS · IN ORDER

01 Develop judgment.

02 Get close to a real problem.

03 Build an early version.

04 Understand the economics.

05 Choose people who can challenge you.

HELD LIGHTLY

"Take the problem seriously while holding my first solution quite lightly."

THE ECONOMICS

"Understand the economics before you become too attached to the story."

> **Deciding what deserves to exist is becoming even more valuable.**

SERGEY SHAYAKHMETOV

09 What advice would you give aspiring entrepreneurs and leaders?

Develop judgment. AI is making it easier to produce software, research, presentations and content. Deciding what deserves to exist is becoming even more valuable.

Get close to a real problem. Build an early version. Put it in front of people who have no reason to flatter you. Learn what they use, what they ignore and what they would pay for.

Understand the economics before you become too attached to the story.

And choose people who can challenge you. A founder's confidence can help a company get started; their ability to listen helps it grow.

I've learned to take the problem seriously while holding my first solution quite lightly. There is usually a better version waiting on the other side of an uncomfortable conversation.

10 What lasting impact would you like to create through your work at Longevium?

I would like us to expand people's sense of what remains possible as they grow older.

There is something quietly depressing about planning your later years around all the things you expect to stop doing. I want to contribute to a future where more people can keep making plans that require energy, courage and curiosity.

I have a young daughter. When I think about longevity, I picture being actively involved in her life decades from now - and still having adventures of my own.

That makes the ambition very concrete.

The real luxury is having time, and being well enough to choose what to do with it.

If Longevium can help more people preserve that freedom, while creating valuable technology and contributing meaningful research, I will consider that work worth doing.

DEMO

The readout.
